Renovating a building or a house built before 1990?

You may be at risk.

A significant number of buildings and homes in Saskatchewan were built before 1990, which means these structures likely contain asbestos. Many Saskatchewan residents are not aware of where asbestos could be present.

Below are a few examples of asbestos-related products that should be identified by an expert before any repairs, renovations or demolitions start.

- Popcorn ceilings
- Loose roof insulation
- Window putty
- Cement asbestos siding
- Roof tiles
- Acoustical tiles
- Floor tiles
- Sheet rock mud tape
- Pipe insulation
