

# Asbestos kills.

## It's best to test.

Asbestos exposure is the **number one cause of work-related deaths in Saskatchewan.**

Asbestos fibres are tiny. When disturbed, they can become airborne and get into the lungs, causing serious health issues such as:

**Lung cancer**

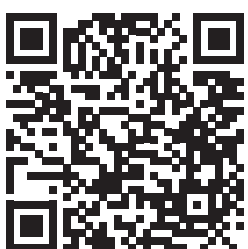

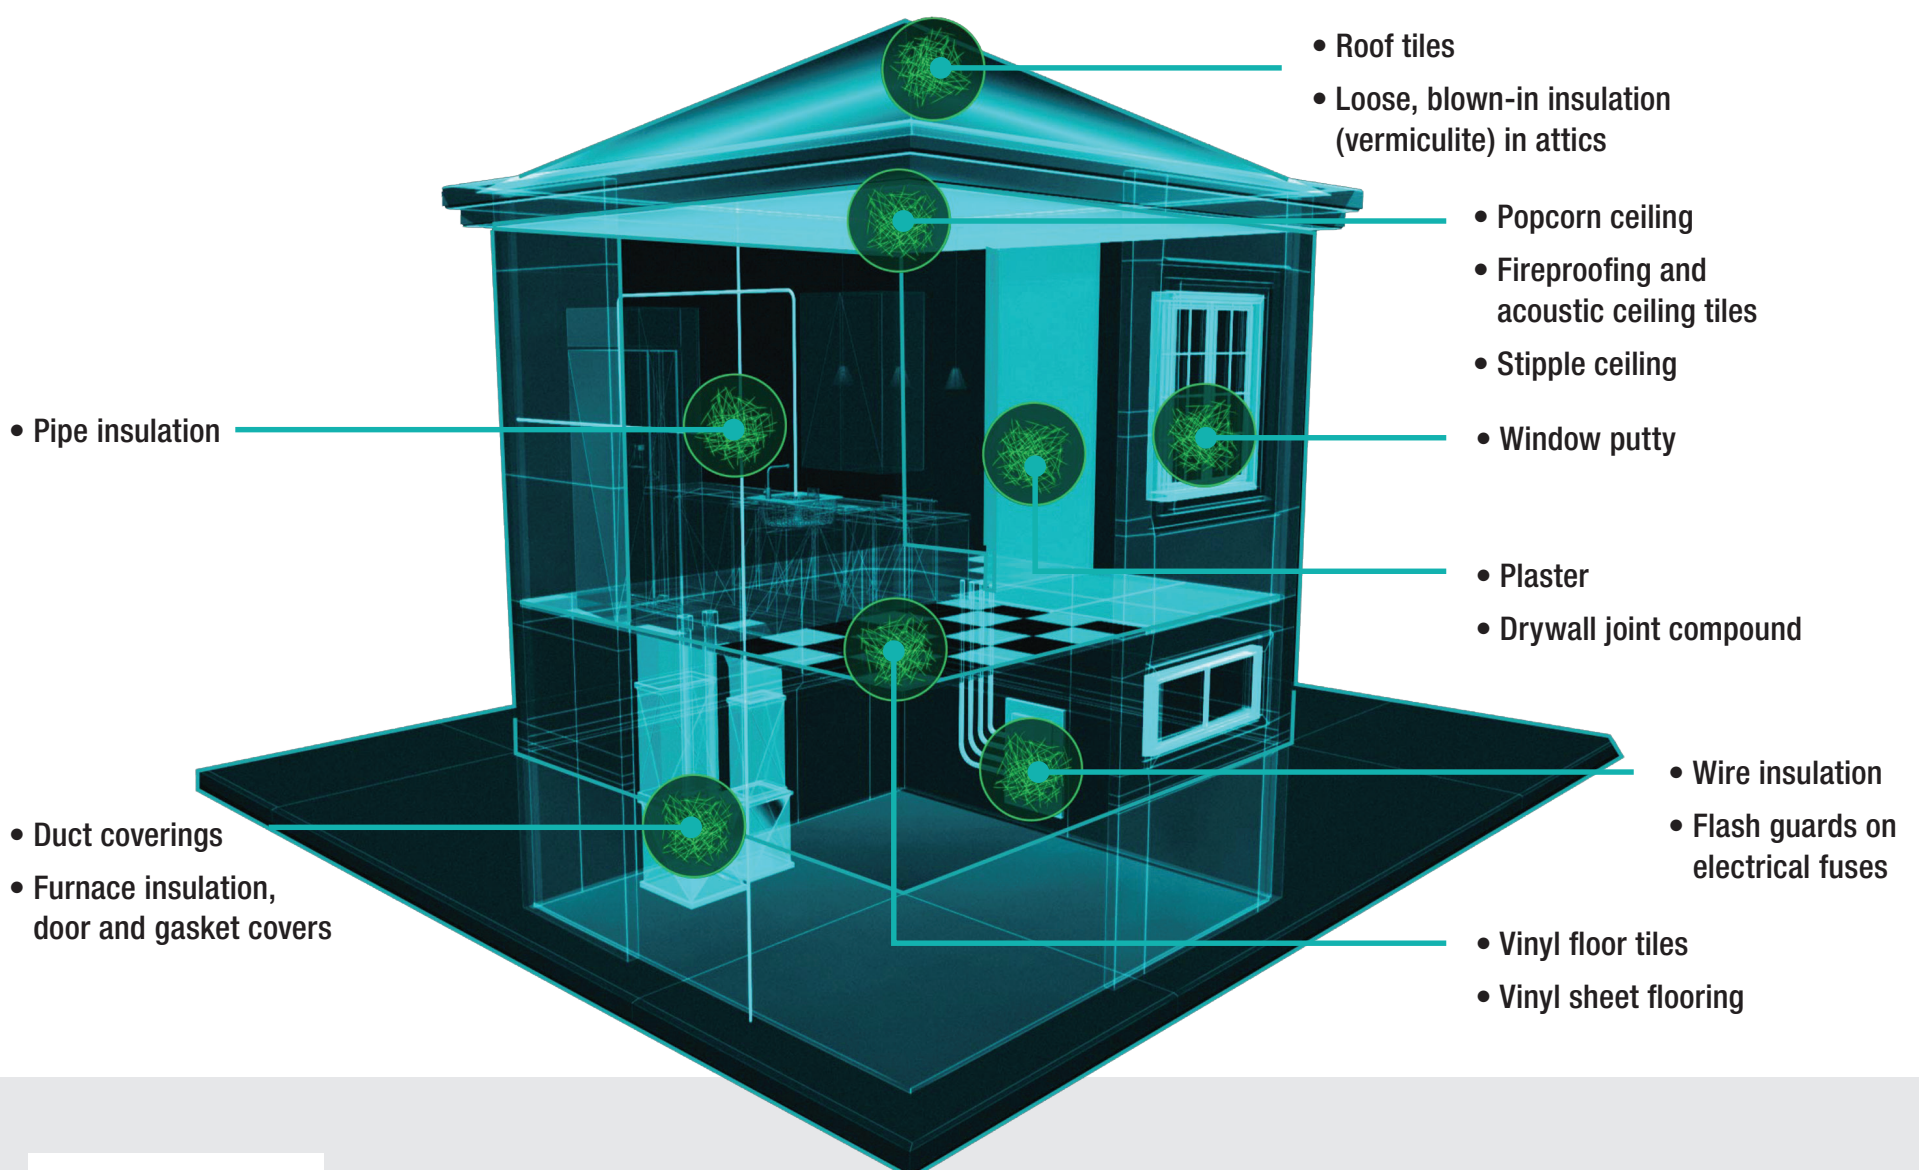

**Asbestosis**

**Mesothelioma**

Asbestos was commonly used in many homes and buildings **built before 1990.** It can be hiding in plain sight.
